Art Unit: 3744

## **DETAILED ACTION**

## **Double Patenting**

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1,2,3,4 and 20 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11,12,13,14,23-28, and 30 of copending Application No. 10/643,911. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims in the co-pending application comprises an outdoor unit installed at an outdoor location, and having therein a compressor, a refrigerant flow control part connected to a discharge outlet of the compressor, for guiding refrigerant according to an operation condition, an outdoor heat exchanger connected with the refrigerant pipe part connecting the elements; flow-control part, and a indoor units installed at respective indoor rooms and provided therein with an indoor heat exchanger of which one end connected with a distributor, and an electronic expansion valve of which one end is connected the indoor heat exchanger and the other end is connected with the distributor; and a plurality the distributor being provided between the outdoor unit and the indoor units, for introduced from the outdoor according to the operation refrigerant passing through selectively guiding the refrigerant

Art Unit: 3744

unit to the plurality of indoor units condition and inversely guiding the indoor units, to the outdoor unit, the pipe part having a first connection pipe (third connection pipe in the claim) of which one end is connected to the refrigerant flow-control part, the other end is connected to the distributor and an outdoor heat exchanger connected between the one end and the other end, a second connection pipe (second connection pipe in the claim) of which one end is connected with the refrigerant flow-control part, for guiding the compressed refrigerant to the distributor, and a third connection pipe (first connection pipe in the claim) connecting an suction inlet of the compressor with the distributor and having a mid portion connected to the refrigerant flow control part, for guiding a low pressure/vapor-phase refrigerant to the compressor, a check valve installed on the first connection pipe (third connection pipe in the claim) adjacent to the distributor, for passing the refrigerant toward only during the first or second mode operation; and a parallel expansion valve installed in parallel with the check valve, for guiding the refrigerant introduced from the distributor to the outdoor heat exchanger only during the third or fourth mode operation, and including an element for expanding the refrigerant; wherein the expansion element on the parallel expansion pipe comprises a heating electronic expansion valve, introduced into the outdoor heat The multi-air conditioner claim for expanding the refrigerant exchanger during the third or fourth mode operation.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

3. Claims 6 and 7 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11,12,13,14,23-28, and 30 of copending Application No. 10/643,911 in view of Michihashi et al (JP 11083223). 10/643,911

Art Unit: 3744

discloses the invention substantially as claimed. However, 10/643,911 does not disclose plurality of compressors and accumulator. Michihashi et al discloses plurality of compressors (1) and accumulator (25) in the same field of endeavor for the purpose of increase capacity and performance. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the apparatus of 10/643,911 with plurality of compressors and accumulator in view of Michihashi et al so as to improve efficiency and capacity.

This is a provisional obviousness-type double patenting rejection.

## Allowable Subject Matter

- 3. Claims 5 and 8-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chen-Wen Jiang whose telephone number is (703) 308-0275. The examiner can normally be reached on Tuesday-Friday from 7:00 to 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Denise Esquivel can be reached on (703) 308-2597. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/643,912
